CAREER OBJECTIVE

Ambitous critical thinker with a passion for scalable web applications and working across the full stack, who plans to use these abilities in a front end developer role that pushes the evolution of my skills.

ABOUT ME

I am a designer, a thinker, a team player, a leader. In my previous career, I helped restaurants, bars, nightclubs, and music venues become better and more profitable. Excellence in guest experience and client satisfaction required strict attention to detail, something I excel in. With marketing and branding, whether in-house or on social media, I helped foster identity and purpose for the businesses I worked with. Now, I want to do just that by utilizing my design skills in web development. With a solid understanding of HTML, CSS, JavaScript, and ReactJS, I am eager to put everything that I have learned together with an innovative company.

WEBSITE

I created a responsive mobile first website using React, with a focus on design and functionality, to showcase a few of my projects. I used Figma to design a wireframe and prototype for site flow and added projects to highlight JavaScript, Bootstrap, and API use, as well as Adobe for my CV and images. I implemented CSS and styled-components for styling, in addition to Framer Motion and CSS animations for motion components. My code can be found by clicking the portfolio link on my "About" page.
